

F-Secure Anti-Virus for Microsoft Exchange

Today's challenges

Most computer viruses spread by e-mail. Many of the new fast spreading and destructive viruses are targeted at the Microsoft Exchange and Outlook environment. Therefore, it is especially important for Microsoft Exchange users to protect their networks.

The solution

F-Secure® Anti-Virus for Microsoft Exchange protects Microsoft Exchange 2007/2003/2000 users from viruses, worms, trojans, spyware, adware, and other security threats. The product scans both incoming and outgoing messages and attachments, as well as internal mail traffic. It also inspects documents and notes posted to Exchange public folders. The protection is transparent and always on as the scanning is done in real-time. The solution also provides spam and attachment filtering.

F-Secure Anti-Virus for Microsoft Exchange includes the F-Secure Spam Control Module which protects users against spam e-mail and other unwanted content. The solution has an industry-leading spam detection rate of over 97%, with virtually no false positives (1 in 1.5 million messages). This improves productivity, saves network bandwidth and reduces legal liability concerns.

F-Secure Spam Control detects and filters spam messages from an organization's e-mail traffic by using advanced content and traffic pattern analysis and categorization. It provides real-time protection against all types of spam, regardless of its content, format or language. The solution protects users from new spam outbreaks instantly. Industry-high accuracy and detection rates are maintained by global e-mail traffic analysis and scanning e-mail using advanced filtering mechanisms.

Key features

Support for Microsoft Exchange Server 2007, 2003 & 2000

Support for Microsoft Small Business Server 2008 & 2003

Real-time e-mail scanning on the e-mail server

Proactive virus protection against new, unknown threats

Content filtering

Attachment filtering

Stripping archives with disallowed files inside

Support for Trusted Senders and Recipients

Virus definitions that are always up-to-date

Easy-to-use web user interface

Combines Ease-of-use and Advanced Functionality

The easy-to-use web user interface makes installation and administration of the product effortless for small and medium business customers. Advanced users and large customers benefit from the powerful centralized management of the solution.

Award-winning Antivirus

F-Secure Anti-Virus for Microsoft Exchange provides effective signature-based protection against viruses, worms and trojans. Virus definition databases are updated transparently and automatically several times a day. The product also protects users against new, unknown malware, thanks to new proactive technologies that find and eliminate unknown (zero-day) threats.

Several Scanning Options

The product scans both incoming and outgoing e-mails. It also supports real-time, manual, and scheduled scanning of mailboxes and public folders.

Advanced Message Filtering

You can also protect your network against fast-spreading viruses, worms and trojans by activating e-mail filtering. You can filter e-mails by their file types and names.

Automatic Spam Filtering

F-Secure® Spam Control™ for Microsoft Exchange detects annoying and offensive spam messages in the company's e-mail traffic, filtering them automatically and transparently.

Support for Trusted Senders and Recipients

The system administrator can exclude certain sender and recipient e-mail addresses from security checks and content filtering. For example, it is possible to exclude a dedicated e-mail address that is used for archiving purposes.

Centralized Management for all Areas of Your Network

With F-Secure Policy Manager, the system administrator can manage the security of workstations, servers and gateways through a single console. Centralized management also makes it easy to administer several Exchange Servers in a large network.
